

Docket No.: IA 1508.01A US  
USSN: 09/295,826

PATENT  
Art Unit: 3621

This listing of claims will replace all prior versions, and listings of claims in the application:

**LISTING OF CLAIMS:**

Claim 1 (currently amended): A method for permitting selective access to data comprising:

- (a) reading burst cut area (BCA) information stored on an electronic storage medium;
- (b) combining user information from a server database with the BCA information to trigger a transaction for a payment;
- (c) verifying the BCA information in a separate database; [[and]]
- (d) collecting the payment for use of content on the electronic storage medium; and
- (e) posting the transaction to the server database.

Claim 2 (previously presented): The method as recited in claim 1, wherein the BCA information is verified in the separate database after a user effects a remote link between a computer and the separate database.

Claim 3 (previously presented): The method as recited in claim 1, wherein the BCA information is read by using a logic that tailors video based information.

Claim 4 (previously presented): The method as recited in claim 1, further comprising storing a record of the transaction in a database.

Claim 5 (previously presented): The method as recited in claim 2, wherein the computer is remotely coupled to the separate database via a network.

Docket No.: IA 1508.01A US  
USSN: 09/295,826

PATENT  
Art Unit: 3621

Claim 6 (previously presented): The method as recited in claim 5, wherein the payment processing is conducted electronically in a secure manner.

Claim 7 (previously presented): The method as recited in claim 5, wherein an electronic code is utilized to authorize use of the content on the electronic storage medium.

Claim 8 (previously presented): The method as recited in claim 1, wherein the electronic storage medium is an optical disc.

Claim 9 (previously presented): The method as recited in claim 8, wherein the burst cut area information is an identifier of the optical disc.

Claim 10 (previously presented): The method as recited in claim 1, wherein the data is stored in a remote database.

Claim 11 (currently amended): A computer program embodied on a computer readable medium for permitting selective access to data, comprising:

- (a) a code segment that reads Burst Cut Area (BCA) information stored on an electronic storage medium;
- (b) a code segment that combines user information from a server database with the BCA information to trigger a transaction for a payment;
- (c) a code segment that verifies the BCA information in a separate database; [[and]]
- (d) a code segment that collects the payment for use of content on the electronic storage medium; and
- (e) a code segment that posts the transaction to the server database.

Docket No.: IA 1508.01A US  
USSN: 09/295,826

PATENT  
Art Unit: 3621

Claim 12 (previously presented): The computer program as recited in claim 11, wherein the BCA information is verified in the separate database after the user effects a remote link between a computer and the database.

Claim 13 (previously presented): The computer program as recited in claim 11, wherein the BCA information is read by using a logic that tailors video based information.

Claim 14 (previously presented): The computer program as recited in claim 11, and further comprising a code segment that stores a record of the transaction on a database.

Claim 15 (previously presented): The computer program as recited in claim 12, wherein the computer is remotely coupled to the separate database via a network.

Claim 16 (previously presented): The computer program as recited in claim 15, wherein the payment processing is conducted electronically in a secure manner.

Claim 17 (previously presented): The computer program as recited in claim 15, wherein an electronic code is utilized to authorize use of the content on the electronic storage medium.

Claim 18 (previously presented): The computer program as recited in claim 11, wherein the electronic storage medium is an optical disc.

Claim 19 (previously presented): The computer program as recited in claim 18, wherein the burst cut area information is an identifier of the optical disc.
